PROFESSIONAL SUMMARY

Full-Stack Developer who has built and deployed production web applications serving 5,700+ students, with hands-on experience in scalable systems using Go, React, MySQL, Redis, Docker, and Kafka. Skilled in designing secure REST APIs, implementing authentication and role-based access control, optimizing backend performance, and building responsive frontend interfaces. Pursuing a B.E. in Computer Science and Engineering; seeking a Full Stack Developer internship.

TECHNICAL SKILLS

Languages: Java • Go • JavaScript • C
Frontend: React.js • HTML5 • CSS3 • Tailwind CSS
Backend: Go (Gin) • Node.js • Express.js • REST APIs • JWT Authentication
Databases: MySQL • PostgreSQL • Redis
Cloud & DevOps: Docker • Nginx • Kafka • Git • GitHub • Linux
Tools: Postman • Firebase Authentication

PROJECTS

iTrigger – Continuous Deployment & Webhook Automation Server • React, Go (Gin), Docker, Caddy, GitHub Webhooks, MySQL GitHub

- Built a lightweight continuous deployment platform in Go (Gin) that automates deployments by mapping GitHub repositories and branches to server-side deployment workflows.
- Implemented HMAC-SHA256 webhook signature verification to authenticate GitHub events and prevent unauthorized deployment triggers.
- Containerized services using Docker and Docker Compose, with Caddy configured as an HTTPS reverse proxy for production-ready deployment.
- Developed a role-based deployment dashboard with project-level permissions, manual deployment triggers, real-time execution logs, webhook monitoring, and deployment analytics.

BitCentral – Full-Stack Institutional Data Platform • React, Go (Gin), MySQL, Firebase Auth GitHub • Live Demo

- Developed a full-stack institutional data platform using React, Go (Gin), MySQL, and Firebase Authentication, currently serving 5,700+ students across 20+ academic departments through secure REST APIs.
- Designed a thread-safe in-memory caching layer using sync.RWMutex and deep-copy buffers, reducing Google Sheets API calls and improving response latency.
- Built RBAC authorization middleware with Firebase JWT verification, SQL-backed role validation, and domain-based access control for secure administration.
- Optimized MySQL performance using transactions, indexing strategies, connection pooling, and TLS-enabled database communication for reliable batch updates.

QR-Plus – Self-Hosted QR Analytics Platform • Go, React, Nginx, Linux VM GitHub • Live Demo

- Architected a polyglot QR platform with a Go backend and React frontend, separating request handling and analytics logic for maintainable service boundaries.
- Independently provisioned and deployed the application on a self-managed Linux VM from scratch, configuring Nginx reverse proxy with custom domain mapping and SSL/TLS-based HTTP-to-HTTPS migration.
- Implemented backend analytics pipelines to capture and persist QR interaction events, enabling queryable operational insights through structured server-side data handling.
- Optimized application and server configuration to run reliably within the constraints of a low-spec free-tier VM (2GB RAM / 2GB storage), improving resource efficiency and stability.

EDUCATION

Bannari Amman Institute of Technology, Erode — B.E. Computer Science and Engineering 2025 – 2029
CGPA: **9.23 / 10**

Holy Children Matriculation Higher Secondary School, Salem Salem, Tamil Nadu
Higher Secondary (12th) – **569 / 600** • SSLC (10th) – **451 / 500**
